EXECUTIVE SUMMARY · DOCTORAL RESEARCH

One Country, Seven Rulebooks

How Regulatory Diversity Shapes Strategy and Operations in UAE Real Estate Firms

Danial Mokhtari, DBA — Clermont School of Business

Based on the doctoral thesis “Regulatory Diversity and Its Influence on Strategic and Operational Decision-Making in UAE Real Estate Firms,” defended July 2026. Research conducted through in-depth interviews with fifteen senior practitioners operating across multiple emirates.

Why this research matters

The UAE is one country, but for a real estate firm it is not one market. Each of the seven emirates regulates land and property on its own terms, and free zones such as DIFC and ADGM add further, legally separate regimes on top. A brokerage that works across Dubai, Abu Dhabi, and Sharjah is, in practice, operating in three different regulatory worlds at once — with different registration systems, different enforcement, and different rules for the same activity.

Everyone in the industry feels this. Yet before this study, no research had systematically examined what this fragmentation actually costs firms, how the best operators manage it, and what would need to change. This thesis set out to answer those questions.

Finding 1: Fragmentation has a real, measurable price

The firms interviewed put concrete numbers on what most of the industry only senses:

- **Duplicated compliance is expensive.** Incremental costs ranged from roughly AED 65,000 a year for a single administrator dedicated to one emirate’s registration requirements, to over AED 1.2 million annually for full multi-emirate compliance operations.
- **Parallel systems slow everything down.** Dubai’s digital Ejari and Abu Dhabi’s Tawtheeq don’t talk to each other, forcing duplicate data entry that adds an estimated 20% administrative overhead — and Abu Dhabi registration was estimated to run about 30% slower than its Dubai equivalent. Sharjah still relies on paper.
- **Enforcement is inconsistent.** The same compliance lapse — publishing a listing without a valid advertising permit — drew an AED 50,000 fine in Dubai and no sanction at all in Abu Dhabi. Firms cannot run one risk policy; they must run several in parallel.

Beyond direct costs, fragmentation quietly redirects capital: firms reported walking away from commercially attractive opportunities in emirates where

regulatory opacity made risk impossible to price, and where slow dispute resolution made enforcement of their rights uncertain.

Finding 2: For firms that master it, complexity becomes an advantage

The study's most strategically important finding is a duality: the same regulatory diversity that burdens most firms becomes a competitive moat for those with superior regulatory knowledge. Firms that genuinely understand how each emirate works can price risk others can't, enter markets others avoid, and position that expertise as a differentiating asset with clients. In a fragmented market, regulatory knowledge is not overhead — it is product.

Finding 3: Successful firms converge on the same playbook

Independently of one another, experienced multi-emirate firms have evolved strikingly similar operating models — typically after early failures with centralised compliance:

- **Dual reporting structures.** Emirate-level compliance officers answer both to local operations and to a central compliance director — keeping local expertise local while maintaining firm-wide coherence.
- **Emirate-specific SOPs.** Differentiated checklists and registration workflows that turn hard-won individual knowledge into institutional knowledge, so compliance doesn't walk out the door when a key employee does.
- **Relationship-mediated compliance.** In emirates where written rules leave gaps, sustained personal relationships with regulatory officials function as the primary mechanism for staying compliant. This is not a workaround — it is a structural feature of the market.
- **Voluntary internal harmonisation.** Many firms simply apply the strictest emirate's standard everywhere they operate, buying themselves consistency the regulatory system doesn't provide.

Finding 4: The industry regulates itself where the federation doesn't

Where formal federal coordination is absent, the industry has built its own informal infrastructure: cross-firm knowledge networks, peer groups, and shared compliance templates that spread interpretations of ambiguous rules. In one documented case, a lawyer-reviewed template for new client-money regulations circulated through these networks and saved participating firms substantial legal fees. These networks perform a quasi-regulatory role — valuable, but informal, ungoverned, and only as reliable as the people in them.

What should change: three connected reforms

Practitioners across every firm size and emirate portfolio converged on the same reform agenda — strong evidence that the strain is systemic, not anecdotal:

- **A unified federal digital platform.** Property records registered in one emirate should be instantly verifiable in any other. UAE Pass proves federal interoperability is already technically and politically achievable; Germany's integrated land registry shows what mature federations do. This alone would eliminate the ~20% administrative overhead.
- **A federal real estate knowledge hub.** An authoritative, formally governed source of cross-emirate regulatory guidance — institutionalising what WhatsApp groups do unreliably today — paired with professional training built for multi-emirate practice.
- **A standing inter-emirate regulatory committee.** Modelled on the coordination that already works in UAE financial regulation: RERA, DMT, and northern-emirate counterparts sharing interpretations and aligning rollouts — coordination, not centralisation, preserving each emirate's authority.

One firm estimated that internal centralisation enabled by such reforms would save it AED 80,000–100,000 a year — before counting the market entries and investments that today's uncertainty prevents.

What this means in practice

- **For brokers and firm leaders:** the operating models documented in this research — dual reporting, emirate-specific SOPs, deliberate relationship investment — are a tested playbook that would otherwise take years of costly trial and error to discover.
- **For new entrants:** budget realistically for multi-emirate compliance, and treat regulatory knowledge as a strategic capability to build, not an administrative cost to minimise.
- **For policymakers:** the sector is unanimous about what it needs, the technical foundations already exist, and the economic case aligns directly with the UAE's ease-of-doing-business ambitions.

About the author

Danial Mokhtari is a Swedish-trained real estate broker, founder of Arabian Estates in Dubai, and author of Dubai Dream (Austin Macauley Publishers, 2026). He was named Rookie of the Year in Sweden and Broker of the Year in Stockholm in 2018, and completed his Doctor of Business Administration at Clermont School of Business in 2026. The full thesis is available on request.
